ECCO Version 4 Release 2

Gaël Forget
Department of Earth, Atmospheric and Planetary Sciences
Massachusetts Institute of Technology

April 2, 2018

ECCO v4 r2 (Estimating the Circulation and Climate of the Ocean, version 4, release 2) is a state estimate covering the period from 1992 to 2011 (Forget et al., 2016). This minor update of the original ECCO v4 solution (Forget et al., 2015) benefits from a few additional corrections (listed in Forget et al., 2016), is provided with additional model-data misfit and model budget output, and is easier to re-run. Its development originally took place within the MITgcm CVS server and later moved to a GitHub repository. For up to date code locations and documentation, please consult:
